Technical Artist bridging art and engineering, with production experience in Unity shaders, art tool development, and optimizing assets for performance and memory budgets on target hardware. Seeking full-time Technical Artist roles starting 2027.

EDUCATION

Carnegie Mellon University – Pittsburgh, PA
Master of Entertainment Technology — Expected 05/2027
Bachelor of Computer Science and Architecture — 05/2025
Minor: Animation and Special Effects

WORK EXPERIENCE

Tencent Games, LIGHTSPEED STUDIOS — VALORANT China Project Team — 05/2026 – 08/2026
Technical Artist Intern

- Adapted VALORANT weapon skins and map assets to mobile GPU budgets by cutting shader ALU cost, texture sampling, and texture memory (ASTC); wrote documentation for artists.
- Extended a RenderDoc-based shader-analysis tool for production, adding a pitfall ruleset that steers its AI output toward correct results and cutting shader analysis from hours to around 15 minutes.
- Built an AI tool that auto-tags several hundred materials for a material library, so artists can find and reuse existing work instead of asking technical artists to rebuild it.
- Prototyped a glitter material in Unreal Engine, recreating view-dependent sparkle with parallax-layered shading.

Blast Furnace Games — 02/2024 – Present
Technical Artist, Lead 3D Artist (Part-time)
https://store.steampowered.com/app/2820700/A_Gentlemens_Dispute/

- Shipped a Unity party brawler on Steam with over 100,000 downloads and a peak of 1,000+ concurrent players.
- Implemented an interactive dice prop in Unity with an Animator state machine (idle, roll, randomized result, return to idle) as a gameplay mechanic that made map play more dynamic and fun.
- Built a Python Blender add-on and C# Unity Editor tool that turns raw Cell Fracture output into game-ready destruction assets, replacing manual cleanup; documented the workflow.
- Profiled performance with the dev team for low-end devices, reducing foliage alpha overdraw, cutting memory through polycount management, and lowering draw calls with static batching.
- Developed HLSL and Shader Graph shaders for game environments, iterating on playtest feedback.

PROJECT EXPERIENCE

AutoStroke – Blender Add-on for Painterly Texturing — 08/2026 – 09/2026
https://github.com/JSS6088/AutoStroke

- Designed a Python Blender add-on that turns any mesh into a painterly, flat-per-stroke texture in seconds, replacing a Substance Designer pipeline that required a paid license and a round trip out of Blender.
- Placed strokes in world space, oriented according to mesh curvature to eliminate UV-layout seams and improve visual quality.
- Added live viewport preview and swappable brush sets to maximize artistic control.
- Delivered to the team's artist on *A Gentlemen's Dispute* and iterated on their feedback.

ItsClogged – Unity 3D Game — 03/2025 – 09/2025

- Wrote a Moebius-inspired HLSL shader that defined the game's illustrative art style.
- Simulated real-time fluid with 60,000+ particles using GPU compute shaders, creating interactive gameplay.
- Customized the Unity render pipeline to draw thick outlines for object highlighting and gameplay feedback.

SKILLS

Software & Tools: Unity, Unreal Engine, Maya, Blender, Substance, Photoshop, RenderDoc, Perforce, Git/GitHub
Technical: C#, C++, Python, HLSL, Shader Programming, Tool/Script Development, Performance Profiling, Animator State Machines, AI-Assisted Workflows, Procedural Generation
Artistic: 3D Modeling, Texturing, Environment Art, Lighting Design, Basic Rigging and Weight Painting
